SUSTAINABLE AND TRANSATLANTIC 40M SUNREEF EXPLORER ECO

Sunreef Yachts has unveiled its innovative 40M Explorer, a groundbreaking model aimed at taking its owners to more remote destinations.

With streamlined and more efficient hulls, the yacht requires significantly less energy to move through the water at high speeds. Combining Sunreef's ultralight composite construction with a cutting-edge electric powertrain, this eco-friendly vessel is capable of crossing oceans with ease.

A standout feature of the 40M Explorer is Sunreef's proprietary solar skin, which converts the yacht's hull and superstructure into a powerful energy source. This solar technology generates sufficient power to operate all onboard systems, from air conditioning and icemakers to the jacuzzi and entertainment systems.

One of the most innovative aspects of the yacht is its expansive aft bathing platform, which can be transformed into a beach club, watersports launchpad, or even a dive shop. The platform is further enhanced by fold-down wings that extend around the sides of the vessel, creating an even larger space for relaxation and recreation.

The main deck houses four spacious guest cabins, while the upper deck is dedicated to the owner's suite, offering a private and tranquil retreat. The suite opens onto a private terrace, accessible through sliding doors, providing a serene outdoor space for the owner.

The yacht's bow design, which slices through the water ahead of the vessel, minimizes the impact of waves, ensuring a smoother ride for guests while also reducing the energy required for propulsion. Alongside the twin 540kW motors, capable of a cruising speed of 10 knots, this bow design is crucial to the yacht's transatlantic capabilities. The 40M Explorer Eco accommodates up to 10 guests in luxurious comfort, attended by a crew of seven.

Explorer and Sunreef ambassador Mike Horn played a key role in the design process, inspiring the brand's vision for sustainability. Sunreef's CEO, Francis Lapp, reflected on their Greenland expedition: *"Exploring Greenland under sail with Mike has served as a profound source of motivation for me to continue to act for a sustainable future within the yachting industry."*
